

(a) objective over the feasible set $\mathcal{F}$

(b) $\mathcal{F} = \{x_1 \neq 0\} \cup \{(0, 0)\}$ is not closed

(c) cross-section $x_2 = 1$

feasible sheet $x_1 \neq 0, x_2 \neq 0$
feasible line $x_2 = 0$

open edge $x_1 \rightarrow 0$ (limit, excluded)
 $x_1 = 0, x_2 \neq 0$: infeasible

minimizing sequence $x^k = (2^{-k}, 1) \rightarrow \bar{x}$
infimum level $f = 3/2$ (never touched)
